

Looking for a young, dynamic, part-time data visualizer for a World Bank project co-producing a citizen-based data feedback system for municipal government in Nepal

We are looking for a superb data visualizer and coder familiar with Open Street Maps to help us co-create a system to help citizens and municipal governments in Nepal “see” the condition of their infrastructure, common property, and public services in order to improve citizen feedback and municipal responses, as well as inform planning and budgeting. Work will be part-time with at least 2 weeks spent in the field in Nepal, and then online with regular interactions with field teams.

If interested, please send a CV and links to your portfolio to [citizenengagementpilot@gmail.com](mailto:citizenengagementpilot@gmail.com)
